PROFESSIONAL EXPERIENCE

Software Engineer

Target

September 2023 – Present, Remote

- **Primary front-end owner** on a backend-focused team; maintained and enhanced multiple **React/TypeScript** apps (invoicing + workflow tools) **end-to-end**, from architecture/config to delivery.
- **Hand-picked by leadership** to join a temporary accelerator team; co-designed UI and built the live scheduling module in React/TypeScript, replacing legacy vendor system and **streamlining appointment booking**.
- Standardized team UIs by migrating apps to Praxis; introduced new testing patterns in flagship invoicing app, **cutting feature dev time by ~33%**; and built a reusable **CI/CD pipeline template** with Vela + Go.
- **Led UX efforts** with PM; created Figma designs and shaped user flows, while also **driving team adoption of Figma** for new features — enabling earlier feedback and more consistent, usable UIs.
- **Go-to resource** for front-end issues, regularly unblocked teammates (including senior engineers) and **mentored peers** on UI concepts/tools.
- **Revamped docs site** (Next.js/Nextra) into a structured hub for apps, on-call playbooks, and incident logs, **improving onboarding and daily knowledge sharing**.
- **Extended backend systems** (Kotlin/Spring/Ktor, SQL) by building endpoints and queries to support new UI workflows.

Software Engineer (Rotational Program)

Target

September 2022 - September 2023, Hybrid

- Completed a year-long engineering **rotational program**, gaining hands-on experience in data pipelines, backend systems, and early front-end development — **laying the foundation for later front-end ownership responsibilities**.

PROJECTS

Flow Reader - [Link to Project](#) (Personal Project, March – May 2024)

- **Built a Next.js-based PDF reader** with drag-and-drop ingestion, virtualized page rendering, and synchronized text-to-speech playback.
- Solved **complex synchronization challenges** (word-to-playback alignment, real-time word highlighting, and custom PDF text parsing) that pushed me beyond work experience, **leveraging Cursor to accelerate iteration** and strengthen front-end architecture skills.

SKILLS

Core Front-End: React, Next.js, TypeScript, JavaScript, HTML/CSS (Tailwind, SCSS), Figma

Testing/Tooling: Cursor, Cypress, Jest, GitHub Actions, Docker

Additional: SQL, Python, Kotlin, Supabase, Vercel

EDUCATION

University of Wisconsin - Madison

Bachelor's, Computer Science • 2022
